1. Executive Summary

This report presents a comprehensive digital marketing strategy for Peloton, a prominent fitness equipment brand and content provider. Our prime objective for this study was to identify critical challenges within the business. The report uses an array of standard frameworks to analyse its current standing in the market and track the internal and external factors affecting this industry. It talks about 5Cs and SWOT analysis to identify strengths and weaknesses within the firm. The primary gaps and scope of improvement identified during the analysis were escalating CAC, lower Customer lifecycle value and flattening growth of new users. Based on the above challenges, the report defines 3 SMART goals with unique objectives. A section is dedicated to strategy analysis that discusses various marketing theories and how their application can help Peloton. It lists down details as to how the efficiency of converting website visitors into customers, can help Peloton with its less expensive marketing efforts. A detailed action plan centred around the firm, is then presented with necessary atomic steps and the expected duration needed to perform the actions. Various marketing and CRM tools are discussed with their estimated pricing to provide an overview of the expected budget needed to take these actions. These actions will allow the company to implement referral programs, upsell, and cross-sell within the existing customer base. By retaining and maximising the value of current customers, Peloton expects to reduce the necessity of costly acquisition campaigns. The report concludes with strategic recommendations tailored to Peloton's unique challenges and goals.

2. Introduction

Peloton Interactive Inc is a New York City based exercise equipment and media company. It was founded in early 2012. The company offers a range of products like stationary bikes, treadmills, and indoor rowers. Beyond the bikes and treadmills, Peloton thrives on its digital ecosystem. Their app provides access to a library of thousands of classes across genres, from high-intensity cycling to yoga and meditation. In addition, they have a diverse instructor team that caters to all fitness levels and preferences, ensuring there's a class for everyone.

This report delves into the company's initial success during the pandemic, the challenges it

encountered, and the strategies it employed to overcome them. By understanding Peloton's experiences and the lessons drawn from its evolution, businesses can glean valuable insights into adapting to changing customer dynamics and maintaining resilience in the face of adversity.

3. Literature Review

In today's high tech world, understanding consumer behaviour is the foundation of successful digital marketing.

Decision models like AIDA (Attention, Interest, Desire, Action) (Ullal and Hawaldar, 2018) offer valuable insights into the emotional and cognitive processes which influence online purchases. These frameworks highlight the internal factors like personality, needs, and past experiences, and external stimuli like targeted ads, social media trends, and influencer recommendations. By understanding how these factors work together, brands can tailor messages that resonate with individual interests and address perceived risks, guiding consumers towards desired actions.

Various traditional models like marketing mix (4Ps) have undergone a transformation in this digital age. Product offerings adapt to cater to diverse preferences, with dynamic pricing models and freemium strategies gaining traction (Pantano, Priporas and Migliano, 2019). Distribution channels explode beyond brick and mortar stores, encompassing social media platforms, influencer partnerships, and content marketing ecosystems.

Fig 1: Traditional marketing mix 4Ps model (Wang, 2020)

Promotion takes on new forms, with targeted ad campaigns, user-generated content, and community driven initiatives playing key roles. Navigating this complex landscape requires a holistic approach, where the RACE framework (Reach, Act, Convert, Engage) guides

omnichannel marketing strategies and ensures brand messages reach, resonate, and convert across diverse touchpoints (Chaffey and Patron, 2012).

Data becomes the fuel for optimization in the digital age and digital driven decision making takes the driver's seat for business.

Fig 2: Data driven business value addition (Analytics, 2022)

A/B testing and experimentation become cornerstones of continuous improvement, with frameworks like Design Thinking and Agile development principles guiding iterative refinement of marketing campaigns for optimal performance.

Social media platforms are no longer mere communication channels and are ecosystems where communities form, brands engage, and loyalty thrives. Social listening and sentiment analysis, guided by frameworks like the Ladder of Inference, help brands understand user sentiment and refine their strategies to resonate with their audience. User-generated content (UGC) becomes a powerful tool for authenticity and engagement that strengthens brand loyalty.

By leveraging these theoretical foundations, brands can develop data-driven, customer-centric digital marketing strategies that navigate the complexities of the online landscape. Understanding consumer behaviour, adapting the marketing mix, embracing data analytics, and building vibrant social communities are not standalone efforts; they are interconnected threads woven together to create a tapestry of successful digital marketing in the age of the empowered consumer.

4. Situational Analysis

The SOSTAC framework (Mary, 2023) provides a structured approach for Peloton to analyse its market position, set clear objectives, develop effective strategies, implement targeted tactics, and continuously monitor and refine its approach. By following this framework, Peloton can effectively navigate the ever-evolving home fitness industry and achieve sustainable growth.

Fig 3: SOSTAC Framework (Zonke, 2021)

4.1. 5Cs Analysis

The 5 C's analysis (van Campen, 2023) is a part of situation analysis that helps a company to gain a holistic understanding of micro internal factors, as well as the external competitive landscape. By analysing these five interrelated factors, Peloton can make informed decisions that align with its overall business goals to stay ahead of competitors, and solidify its position as a leader in the home fitness industry.

1. Company:

After exploring Peloton website and researching their accounts on various social media platforms we can establish the following strengths and weaknesses of the company.

- **Strengths:** Strong brand recognition and loyal customer base, innovative technology and platform features, subscription model providing recurring revenue, established partnerships with fitness instructors and influencers.
- **Weaknesses:** High initial equipment cost (number) and recurring subscription fees, recent marketing missteps and negative brand perception, struggles with identifying and focusing on specific target customers, reliance on a few key suppliers.
- **Culture:** On the cultural front, Peloton holds an average rating of 3.5 out of 5 in a total of 1278 total reviews posted on Glassdoor platform. Categorically the lower ratings appear to be issues in decisions made by the senior management

Peloton Interactive Reviews

Ratings by category ⓘ

4.0 Diversity and Inclusion

4.0 Compensation and Benefits

3.6 Culture and Values

3.6 Work/Life Balance

3.0 Career Opportunities

2.8 Senior Management

Fig 4: Peloton interactive employees review at Glassdoor (Glassdoor, 2023)

- **Resources:** Peloton is publicly listed and currently holds a market cap of \$2.14 B (CompaniesMarketcap, 2023) which is huge in terms of a fitness brand. The company's careers page boasts of a talented team of engineers, designers, data scientists, instructors, and marketing professionals who bring diverse skills and expertise to the table. On technology front their platform is a key differentiator, offering interactive workouts, data tracking, and personalised training recommendations

2. Customers:

Target customer and markets: As we didn't have any primary source of data to identify their ideal customer and market, we are relying on visitor data that we found via SEMrush. The figure below gives a high level overview and identifies the top 3 geographies with most users

of their website. The breakdown of device segment seems to equally split for the UK but skewed towards desktop for the US and Sweden.

Fig 5: Geographical breakdown of visitors Semrush (SEMrush, 2023)

3. Competition:

- Direct competitors: The fitness space is crowded with many big and small players that are directly competing with Peloton. We skimmed through their website and social media platforms to identify their offerings and online presence. Below is a chart that tells the various product offerings by these competitors.

	Smart bikes & equipments	Studio facility	Rental Service	Periodic Subscriptions
Peloton	Yes	Yes	Yes	Yes
NordicTrack	Yes	Yes	No	Yes
Exxentric	No	No	No	Yes
SoulCycle	Yes	Yes	No	Yes

Table 1: Difference in product offerings from competitors

In the following table, we captured their social media footprints on various platforms like Instagram, Facebook, Twitter, LinkedIn, and youtube. And to measure the customer satisfaction index we have listed Trustpilot rating for each of the competitors.

	Peloton	NordicTrack	Exxentric	SoulCycle
Instagram	@onepeloton 1.9M followers 5054 posts	@nordictrack 317K followers 2179 posts	@go_exxentric 56.7K followers 1273 posts	@soulcycle 389K followers 3504 posts

Trustpilot	4.2/5	2.3/5	4.5/5	3.0/5

Table 2: Competitor analysis of social media presence and engagement

From the table we can see that Peloton has the highest social media presence on all platforms which makes it a market leader in this space.

4. Collaborations:

- Partnerships: Peloton has been making sure to grab any opportunity to boost their social media presence by having regular collaborations with sports and fitness celebrities. These partnerships help them leverage their expertise and influence to reach new audiences:
 - Beyoncé & Jay-Z's Peloton Collection (Peloton, 2021): Peloton's website showcases their limited-edition collection with Beyoncé and Jay-Z.
 - David Beckham's Peloton Ad Campaign (Indoor cycling channel , 2021): Peloton's YouTube channel features their ad campaign with David Beckham.
- Industry alliances: As a market leader they are also able to tie up with big technology firms like apple and spotify for music integration with their devices
 - Peloton website highlights their integration with Apple Music (Straten, 2022) and spotify (Gorden, 2023):

5. Communication:

- Focus on community building:

A major aspect of maintaining an online presence is to build a community. Peloton has been utilising social media platforms to create a sense of belonging and connection among Peloton users
- Address negative feedback: People use twitter as a primary form of appreciation or dissent whenever they consume any service. After learning from the miserable event in year 2021 (Lambert, 2022), Peloton's PR team has been very actively manage and address any negative commentary on the platform

Fig 6: Building brand with effective communication (Kucuk, 2011)

Overall:

Peloton needs to leverage its strengths in technology, brand recognition, and community to differentiate itself from competitors and address customer needs effectively. Focusing on targeted marketing, personalised communication, and building a strong community will be crucial for Peloton's continued growth and success in the competitive home fitness market.

4.2. SWOT Analysis

A SWOT analysis (Hanis and Yusuf, 2022) serves as a comprehensive tool to assess a company's internal strengths and weaknesses while identifying external opportunities and threats. It helps in strategic planning by capitalising on strengths, addressing weaknesses, seizing opportunities, and mitigating threats. This analysis can guide Peloton in optimising its strengths, improving weaknesses, exploring new avenues, and proactively mitigating potential risks in the dynamic fitness market.

Strengths	Weaknesses
● Robust Online Presence: The company's strong online presence, through an engaging website and active social media platforms, provides a significant competitive ● Digital Expertise: A team skilled in digital marketing and e-commerce operations is a vital strength in navigating the online business landscape. ● Innovative Online Services: The company offers innovative online services/products that cater to the evolving needs of the digital consumer.	● Limited Online Market Penetration: Despite a robust online presence, the company may have limited penetration in certain key digital markets. ● Over-reliance on specific digital platforms can pose a risk, particularly if these platforms change their policies or algorithms.
Opportunities	Threats
● Emerging Technologies: Leveraging emerging technologies like AI, AR, and VR can open new avenues for customer engagement and service delivery. ● Global Reach: The Internet provides an opportunity to expand the business globally with relatively low entry barriers. ● Partnerships and Collaborations: There are opportunities for strategic partnerships and collaborations with other online entities to enhance market reach.	● Intense Online Competition: The digital landscape is highly competitive, with new players continuously entering the market. ● Changing Consumer Preferences: Rapidly changing consumer preferences online can be a threat if the company is not agile enough to adapt. ● Regulatory Changes: Changes in digital privacy laws and e-commerce regulations can impact online operations.

Table 3: SWOT analysis for Peloton

4.3. Porter's 5 Forces Analysis

Porter's Five Forces Analysis (Wellner and Lakotta, 2020) is a strategic tool that assesses the competitive forces within an industry. By conducting a thorough Porter's Five Forces Analysis,

Peloton gains insights into the industry dynamics, enabling the formulation of strategies to capitalise on strengths, address weaknesses, and stay resilient against external forces. It helps in making informed decisions regarding pricing, supplier relationships, differentiation strategies, and customer retention in the competitive market.

Fig 7: Porter's 5 Forces Analysis for Peloton

4.4. SMART objective setting – Where do we want to be?

Utilising the SMART framework (Shahsavari et al., 2021) —Specific, Measurable, Achievable, Relevant, and Time-bound—can be immensely beneficial for Peloton in setting and achieving its goals. By applying the SMART framework to its goal-setting process, Peloton can ensure that its objectives are well-defined, achievable, and aligned with its broader business strategies. This structured approach aids in improving focus, monitoring progress, allocating resources

effectively, and ultimately achieving meaningful outcomes in the highly competitive digital fitness industry.

Objective	Reduce customer acquisition cost (CAC)	Increase customer lifetime value (CLV)	Increase Monthly Active Subscribers
Specific	Decrease CAC by 15% of current cost within 1 year	Increase CLTV by 10% of current cost by the end of year.	Increase the number of monthly active subscribers on the Peloton platform
Measurable	Track CAC through marketing spend and customer acquisition channels	Track CLTV through customer retention rate and average order value.	Track monthly active subscribers using transaction records
Achievable	Offer trial periods or discounts for new customers	Develop loyalty programs and personalised recommendations for existing customers, explore new revenue streams (apparel, accessories).	Utilise targeted marketing campaigns, referral programs, and enhanced customer engagement strategies to attract and retain customer
Relevant	To meet financial objective of profitability	For recurring income and sustainable growth.	Align with brand goals of building loyalty and attracting new customers.
Time-Bound	Monitor progress quarterly and adjust pricing	Monitor product offerings, and loyalty programs accordingly.	Achieve the growth target within the next fiscal year.

Table 4: SWOT analysis for Peloton

5. Strategy Analysis

Several theories can help you critically analyse and explain how Peloton can achieve its objectives of increasing brand awareness and customer lifetime value. Here are a few key ones:

Social Exchange Theory (Cook et al., 2013) asserts that individuals make decisions based on a rational assessment of the costs and benefits of their actions in social interactions. In the context of Peloton's objective to increase subscribers, this theory can be applied as follows:

Costs and Benefits Analysis: Peloton can analyse the perceived costs and benefits of its subscription service from the customer's perspective. Understanding what subscribers value, whether it's access to live classes, community engagement, or fitness results, helps tailor marketing strategies to emphasise these benefits.

Trust and Commitment: Building trust and commitment among subscribers is vital. Peloton can use the theory to foster trust by delivering consistent value and ensuring reliable service. Offering a variety of workout options and maintaining instructor-customer relationships can enhance commitment.

Data-Driven Insights: Peloton can use CRM systems to collect and analyse customer data. By understanding individual preferences and behaviour, Peloton can offer personalised recommendations and experiences, increasing customer satisfaction and retention.

Effective Communication: Peloton can proactively engage with customers through personalised emails, in-app messages, and social media interactions. Timely communication about new content, challenges, or community events can keep customers engaged.

6. Recommendation

We have broken down the high level SMART objectives (Shahsavar et al., 2021) into a list of tasks. The following is the breakdown of major tasks and their timelines in a Gantt Chart (Palombarini and Martínez, 2021).

S. No.	TASK TITLE	MONTH 1	MONTH 2	MONTH 3	MONTH 4	MONTH 5
1	Decrease Customer acq cost (new markets)					
1.1	User data analysis					
1.1.1	Customer Segmentation					
1.2	Content Personalization					
1.3	Marketing Channel Optimization					
2	Increase Customer Lifetime Value					
2.1	Implement CRM System					
2.2	Repeat customer segmentation					
2.3	Personalised Communication				Ongoing	
3	Increase monthly subscription					
3.1	User data analysis					
3.2	Target Audience Refinement					
3.2.1	Content Personalization					
3.2.2	Messaging for each target segment				Ongoing	

Fig 7: Gantt Chart with tasks to achieve SMART objectives

6.1. Action plan to reduce customer acquisition cost

This can be done by expanding into new markets and customer segments: We can identify users' new regions or target specific demographics with tailored marketing campaigns.

The detailed list of tasks could be:

- Analyse historical customer acquisition data to identify segments with the highest CAC.
- Segment customers based on demographics, behaviour, and acquisition channels
- Create personalised marketing content and messaging for each target segment
- Evaluate marketing channels (e.g., digital ads, social media, affiliates) and allocate resources to the most cost-effective ones.

6.2. Action plan to improve customer lifetime value

To improve the customer lifetime value we need to encourage repeat purchases and referrals through loyalty programs and personalised recommendations. We can develop a CRM system that will help to keep a pulse check on existing customers and cross sell items:

The detailed list of tasks could be:

- Select and implement a CRM system for data collection and analysis
- Segment customers based on behaviour and characteristics.

- Send personalised recommendations and offers, address concerns promptly through the use of social media platforms and solutions like salesforce or zendesk.

6.3. Action plan to improve monthly subscriptions

To increase monthly subscriptions, we have to reach out to new buyers. Peloton can offer free trial subscriptions to users so that they can experience the online platform before committing a bigger amount. We can retargeting practices using facebook and google analytics suite. Detailed steps can include:

- Analyse historical customer acquisition data to identify segments with the highest CAC (to avoid targeting)
- Refine the target audience by focusing on segments that offer lower CAC
- Create personalised marketing content and messaging for each target segment and broadcast messaging.

To run the entire action plan, we require certain tools and software as a service. Based on the choice of tools and team size the budget estimate would vary.

Tools	Resources	Unit cost	Duration	Total cost
User behaviour tracking	Hotjar	\$32 user/month	12	\$384
CRM system	Salesforce	\$80 user/month	12	\$960
Marketing channels	Facebook Instagram Twitter Linkedin	\$0.86 (CPC) \$3.15(CPC) \$0.34(CPC) \$4.65(CPC) (Barraclough, 2023)	4 Monthly no. of users to be targeted (10k) split equally on 4 channels	22,500*4 = \$90,000
Automation tools	Hootsuite	\$20 user/month	4	\$80

Table 5: Budget estimate for various services that we plan to use

7. Performance Measurement

After implementation plans, we need to measure the performance of each action to examine the effectiveness. Following are the KPIs (Key performance indicators) for performance measurement and the ways to calculate them.

KPI 1: Monthly Active Subscribers (MAS) Growth Rate

- Metric: Calculate the percentage increase in MAS compared to the previous month.

We could measure this as part of a regular data analysis. A high level dashboard can be constructed to analyse trends, and calculate growth rates using visualisation tools

KPI 2: Customer Acquisition Cost (CAC)

- Metric: Measure the cost to acquire each new subscriber.

CAC can be calculated by dividing the total marketing and advertising costs by the number of new subscribers acquired during a specific period.

KPI 3: Customer Lifetime Value (CLV)

- Metric: Measure expected revenue generated from a customer throughout their lifecycle.

CLV can be estimated by analysing historical customer data, including purchase history, subscription duration, and average spending.
