

myBageecha: SEO Strategy

By Riya Singh | September 2026

1. Target Audience & Search Intent

Primary customers

Buyers are urban Indian households that cannot get this range from a neighbourhood nursery.

1. New plant parents (age 25-40, living in metro city, mostly apartments): balcony and indoor gardeners seeking low-maintenance, air-purifying and flowering plants.
2. Gift buyers: shoppers seeking unique gifts for housewarmings, birthdays, Diwali and corporate occasions. Preserved-flower bottles, moss frames and flower jewellery suit this group.
3. Home decor enthusiasts: buyers of biophilic, sustainable décor such as moss wall art and LED zen fountains.

Pre-purchase search behaviour:

1. Discovery: "best indoor plants for living room", "air purifying indoor plants", "housewarming plants", "moss wall art for living room", "decorative natural fountain", "water fountain for home" etc.
2. Informational: "how to care for specific plants", "how long do preserved flowers last" etc.
3. Commercial: "best indoor plants," "unique housewarming gift ideas," "moss wall art for living room,"
4. Transactional: "buy flower bulbs online India," "preserved flower bottle price," "buy plants online {any city}"

2. SEO Opportunities

1. Address the niche decor market - Based on keyword search. General terms like buy plants online or indoor plants are heavily competed by large plant retailers. We observed a few categories specially in the decor market which can get us the best ROI.

Trends for the terms like preserved flowers, moss frames and décor have low competition. E.g. "Real flower jewellery" and "resin flower jewellery" are 1K-10K each, the same level as "preserved flowers." "Botanical jewellery" gets up to 100-1K searches a month.
2. Capture brand searches and repair off-site reputation - terms like "mybageecha reviews" shows buyers checking reputation before purchase and it seems third-party profiles are unmanaged: MouthShut rates the brand 1.6/5 (143 votes, unclaimed, no brand replies) and WedMeGood also has a low rating.
3. Use the reviews already collected - myBageecha already collects reviews through Judge.me, and product pages carry valid rating schema. Show star ratings on collection pages and the homepage, and use Judge.me's Google integration so ratings appear across Google.

3. Keyword Strategy

Finding keywords

1. We can use Google Keyword Planner to get volume ranges, bid value, YoY trend. Use Google autocomplete for "People also ask," and a Semrush Keyword Gap against Ugao, Nurserylive and FNP to find keywords where competitors are ranked well and myBageecha does not.
2. Based on the keywords we can create an intent map from the sections of the menu that we have on our website like (Nature Decor, Fresh Plants, Bulbs, Seeds, Pots, Garden Essentials) to build a table of keywords and urls.

Building strategy

1. We can prioritize the keywords improvement using impact (search volume x commercial value) vs ranking difficulty, for those keywords identified earlier and address them in the short term.

Intent	Page type	Example
Transactional	Category / product page	"buy preserved roses online"
Commercial	Collection or buying guide	"best housewarming gift plants"

2. Seasonal keywords (winter plants, Diwali gifts) should be published 6-8 weeks before their Google Trends peak.

4. Technical & On-Page SEO

A basic audit of the homepage, a few category pages, a product page and robots.txt shows a solid Shopify base application, clean robots.txt with sitemap, AI crawlers allowed, keyword-led title tags, category intro copy with internal links, and descriptive image alt text on most images.

1. Page performance - The website performance is average on desktop (61/100) but loading too many resources which slows down on mobile giving a pagespeed score of 39/100
2. Homepage improvements - The purpose of landing pages is usually to provide an overview of offerings and CTAs for going into details. The current length of the homepage has too many offerings and puts the trust section near the bottom of the page which would rarely be visited by users. A better implementation would be a section that says "x' happy customers", "operating in more than 'y' number cities" "average 'z' rating" etc.
3. Without the actual data from Google analytics, search console or other user monitoring tools etc. we might not be able to pinpoint the problems as to how many pages are having issues like 404, 500 etc. or high bounce rate due to missing inventory etc. e.g. a general communication seems to be missing across website to specify city specific delivery information (can be used to build long tail keywords)

5. Content Strategy

myBageecha has published a few blog posts this year, mostly on plants and bulbs (bonsai, lilies, adenium, seasonal bulbs), with little on its unique decor range. A gifting collection exists (/collections/gifting) with good meta tags and FAQs, but it holds only 2 products (gift wrap and a sold-out item) and is missing from the main menu.

Landing pages to build (convert commercial intent):

1. Gifting hub to be added to the menu, with occasion pages: housewarming, birthday and anniversary, Diwali, and a corporate and wedding bulk-gifting page with an enquiry form.
2. Preserved flowers hub targeting "preserved flowers," "preserved roses" and "long lasting flowers," with an FAQ answering the questions customers ask on Instagram (the liquid, lifespan, care, eco-friendliness).
3. Trust page: To add the following sections on the official website, secure payment, COD, order tracking, returns, reviews answering "Is myBageecha safe?", "Does myBageecha delivery in Delhi/Bangalore/Mumbai" etc.
4. Seasonal pages (winter bulbs, festive gifting) optimised and live 6-8 weeks before demand peaks.

Blog content (attract informational traffic): organise posts into topic clusters, each with a pillar guide linking to supporting articles and products:

1. Preserved flowers and decor: "preserved flowers vs fresh plants vs preserved moss frame," care guides, styling ideas (captures "indoor plants care" searchers, 1k-10k/month).
2. Gifting and festivals: Diwali plant gifts, Navratri flowers, housewarming ideas, wedding return gifts (10k-100k).
3. Indian plant care: Balcony, low-light and seasonal guides by climate and city.

Frequency and conversion: Publish 2-4 posts per month, refresh outdated posts (e.g., the 2017 gifting article), and add product carousels instead of product mugshots, clear CTAs to every guide so content drives sales, not only visits. Missing internal linking opportunity. Some blog articles are not having product links e.g.

<https://mybageecha.com/blogs/articles/winter-spring-flowering-bulbs>

6. Link Building

myBageecha already has strong authority assets: coverage in The Economic Times, The Hindu, Indian Express, YourStory, Deccan Herald and Mid-day, plus a past Instagram partnership. The plan builds on these before chasing new links.

1. Audit and benchmark: Semrush shows an Authority Score of 32, 800+ referring domains (66.6% dofollow), but quality is weak. One low-authority domain and several spammy Blogspot sites send hundreds of links, and the best editorial links (ABP Live, Wikipedia) are nofollow.
2. We need to review this pattern for unnatural links and disavow clearly manipulative domains.
3. Reclaim brand mentions: Find press articles and blogs that mention myBageecha without linking (Google Alerts, Semrush Brand Monitoring) and request a link to the relevant page.

4. Digital PR: Pitch timely stories to lifestyle and home media: festive green-gifting guides (Diwali, Rakhi), urban gardening trends from order data, and the founder story (a family nursery-turned-brand from Ahmedabad).
5. Linkable assets: Create resources others cite: an Indian planting calendar by region and season, a preserved-flower care guide, and a plant-gifting guide by occasion.
6. Collaborations: Partner with interior designers, home decor bloggers and gardening YouTubers for reviews, styled features and gift roundups.
7. Citations and listings: Claim and complete Google Business Profile (Ahmedabad), MouthShut, WedMeGood and check IndiaMART ownership (for bulk gifting). These add brand trust and relevant links.

7. AI & Automation

AI speeds up research and analysis; we can automate processes with humans in the loop to keep control of accuracy, brand voice and final approval.

1. Keyword clustering and intent tagging: export Keyword Planner and Google search console lists and use an AI assistant (Claude, ChatGPT) to group thousands of terms by topic and intent, then map each cluster to one URL.
2. Product and category content at scale: draft unique descriptions for templated products (e.g., for categories like preserved tabletops), meta titles, FAQs and alt text from a brand-voice guide and a verified fact sheet, so description and claims remain consistent.
3. Structured data: generate and validate new JSON-LD (Organization, collection breadcrumbs) and monitor existing Product and Review markup for errors after theme or app changes.
4. Monitoring automation: Consolidating and monitoring dashboards by Search Console and GA, weekly Semrush site audits, rank tracking, and alerts for 404s.
5. AI search visibility: robots.txt already allows AI crawlers. Clear FAQs, schema and consistent facts improve the chance of being cited in Google AI Overviews, ChatGPT and Perplexity; Manually track brand mentions in AI answers monthly.

8. 60-Day Growth Plan

Priority	Initiative	Duration	Success measure
1	Mobile speed and schema quick wins: audit third-party apps to cut page load blocking time and add homepage Organization schema	Week 1 - 2	Mobile lab score up from 39; warnings cleared; Core Web Vitals still passing
2	Gifting hub relaunch before Diwali: stock the gifting collection, add it to the main menu, build occasion pages and a corporate/wedding bulk-enquiry page	Week 1 - 4	Organic sessions and revenue from gifting pages; bulk enquiries
3	Preserved flowers hub/Floral jewellery (experiment): retarget the category to "preserved flowers" & "floral jewellery" with a new H1, title, FAQ and unique copy for the top half of tabletops items; rewrite titles on half the products and compare CTR with the untouched half	Week 4 - 6	Rankings for Tier 1 keywords; CTR uplift vs control group
4	Reputation and trust: claim MouthShut, WedMeGood and Google Business Profile; reply to reviews; publish a trust page; send post-purchase Google review requests	Week 2 - 8	New Google reviews; share of positive results on page 1 for "mybageecha reviews"
5	Technical clean-up: consolidate duplicate collections with 301 redirects, fix alt text, align product facts	Week 6 - 8	No cannibalising URLs; clean Site Audit; stable indexing

Alongside these, publish 3 - 4 posts every month as defined in content strategy and also address homepage concerns to build trust and improve buyer confidence.

9. Key Metrics

Area	Metrics
Revenue (primary)	Organic revenue, conversion rate, average order value, bulk/corporate enquiries
Traffic	Organic sessions (brand vs non-brand), sessions to new landing pages (gifting, preserved flowers)
Visibility	Impressions, CTR, average SERP position
Technical health	Indexed pages, Core Web Vitals pass rate, crawl errors

Authority	Quality referring domains, Authority Score, Google and MouthShut ratings
AI search	Brand citations in Google AI Overviews & ChatGPT for target queries

10. Content Strategy Exercise

Category - "Preserved Flowers": it is myBageecha's most distinctive product line. Preserved flower bottles was one of myBageecha's top Instagram reels (45K views), and keyword data shows that it is a growing segment with low competition from large plant retailers.

10 target keywords (volumes: Google Keyword Planner, India)

#	Keyword	Intent	Target page	Monthly searches
1	preserved flowers	Commercial	Preserved flowers hub	1K–10K
2	preserved roses	Commercial	Eternal Rose products	1K–10K (low competition)
3	long lasting flowers	Commercial	Preserved flowers hub	100–1K (highest bid, ₹76)
4	preserved flower gift	Commercial	Gifting occasion page	100–1K
5	eternal rose	Commercial	Eternal Rose product	100–1K
6	forever rose	Commercial	Eternal Rose product	100–1K
7	rose in glass dome	Commercial	Eternal Rose product	100–1K
8	eternity roses	Commercial	Eternal Rose products	100–1K
9	roses that last a year	Informational	Blog 1	10–100
10	how long do preserved flowers last	Informational	Blog 1	Recurring customer question

Blog topics

1. "How Long Do Preserved Flowers Last? Complete Care Guide and FAQs"
2. "Preserved vs Artificial vs Fresh Flowers: Which Is Best for Indian Homes?"
3. "Long-Lasting Gift Ideas for Diwali, Anniversaries and Housewarmings"

Outline: Blog 1

1. Title (H1): How Long Do Preserved Flowers Last? Complete Care Guide
2. Meta title: How Long Do Preserved Flowers Last? Care Guide | myBageecha
3. Meta description: Real flowers that stay beautiful for years. Learn how long preserved flowers last, how they are made and simple care tips.
4. Primary keyword: how long do preserved flowers last. Secondary: preserved flowers, flowers that last a year, preserved flower care. Length: 1,200-1,500 words.

Structure:

1. Quick answer (40-60 words, written to win the featured snippet): one verified lifespan figure, kept indoors away from sunlight.
2. What are preserved flowers? Real flowers treated to hold colour and shape; in bottles, suspended in oil (answers the "water or glue?" question).
3. What affects lifespan: sunlight, humidity, heat and handling (short table).
4. Care in 5 steps: indirect light, no watering, dust with a soft cloth, wipe any oil at the cork, avoid humid rooms.
5. Are they eco-friendly? Natural materials, no weekly replacement like cut flowers.
6. Preserved vs dried vs artificial: brief comparison linking to Blog 2.
7. Styling and gifting ideas: product carousel (e.g., Prismatic Hues, Blossoms of the Sky) and a link to the gifting hub.
8. FAQs (FAQPage schema): Are they safe under LED lights? Do they need water? Can they be shipped outside India? Can I customize colours?
9. CTA: "Shop preserved flowers" linking to the hub; related-post links to Blogs 2 and 3.
